

MODULE ERROR FIX

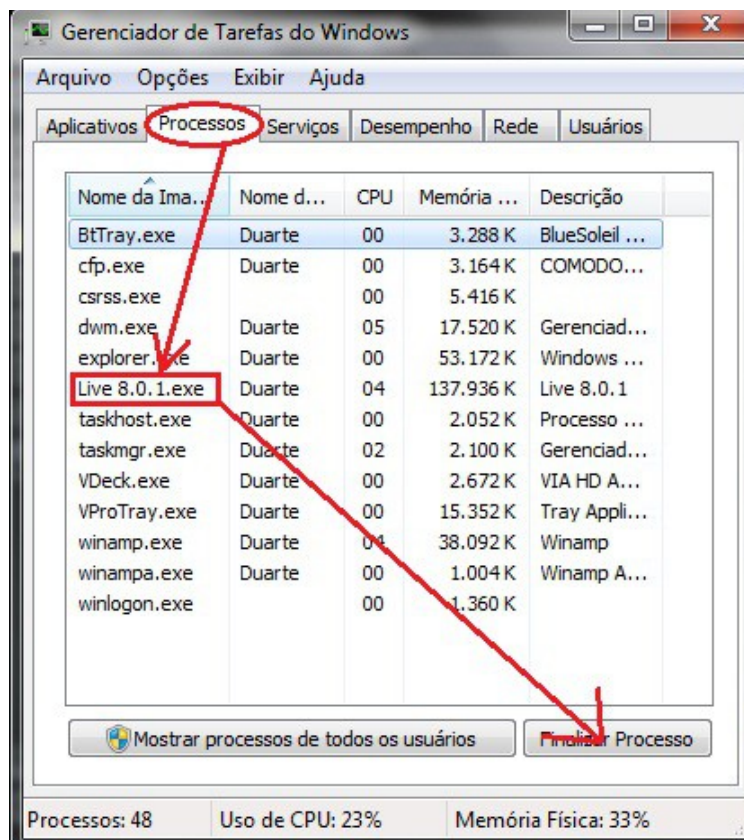

Some DAWs like Ableton Live 8 do not let the VSTi expand the modules to work properly without administration permission.

Case you see this kind of error when trying to initialize your VSTi:

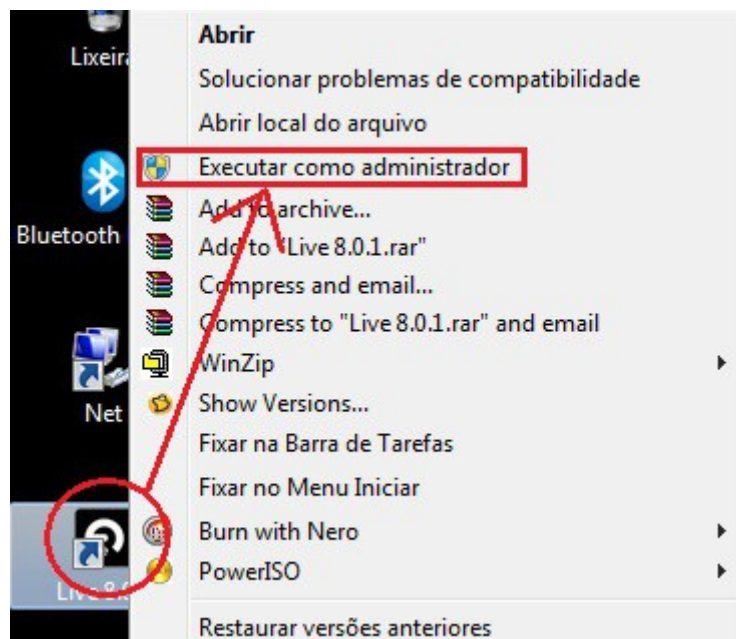

Do not keep pressing the OK button, you will not get anywhere!

Press -> **CTRL + ALT + DELETE**, open your **Task Manager** and **Kill** the application!

In this case Ableton Live 8!

Then right click on your DAW's icon and **EXECUTE AS ADMINISTRATOR**:

Then you can load and run your VSTi properly....

After this you no longer need to run your DAW as administrator, unless for another plugin!

Any problem contact:
