

Percumat 2

Rhythm machine for backing drums & percussion

This is a versatile Rhythm machine for backing drums percussion so definitively not an 808 or 909 type thingie. It features 6 instrument parts / slots to choose from 512 inbuilt drum & percussions sounds. There are two step sequencers one for setting up the beat steps in groups of 4 x 8 steps (or 4 x half a bar) labeled A1, A2, B1 & B2, while the 2nd sequencers on the left allows you to control a sequence of the 8 step beat groups in 16 steps. Thus it is easy to get variations without having to program complete 16 step bars. In addition to that there is an Auto Track Mute feature for tracks 4, 5 and 6 to have one or two tracks muted for a certain range.

The beat step sequencer does offer two additional features: StepMode and Play number of Beats i.e. Steps so you can have a 7/8, 6/8, 5/8 or even 3/8 beats while Step Mode changes the order of steps to play in jumping to every 3rd, 4th, 5th etc. step with setting at 7 steps playing the sequence backwards. This is a real playground not only for the lovers of experimental rhythms.

The unit comprises 512 drum & percussion sounds in four banks which are sorted in a similar way:

1 - 16 = Kicks, 17 - 32 = HiHats, 33 - 46 = Snares, 47 - 52 = Toms, 53 - 62 = Cymbals, 63 - 66 = Tambourines, 67 - 75 = Shaker, Maracas etc., 76 - 80 = Rattles, 81 - 100 = Ethnic perc (Tabla, Udu etc.), 101 - 105 = Blips, Claps, 106 - 111 Conga, Bongo, 112 - 128 various percussion.

Instrument slots

There are six identical instrument slots

Top section: selector for instrument, bank, button to switch between internal sf2 or wave file loading and a Mute button.

Please read appendix 3 on loading wave files.

Accent Offset setup for 8 steps via graphic display in 8 'sliders' plus pattern selector for different presets. Changing a preset pattern and saving the patch will memorize the edited settings. The Stereo button allows to switch each slot individually to a single output pair slot 1=3&4, slot 2=5&6, to slot 6=1&2, as slot 1 is used for kick in most cases single out 3&4 are used etc. Note: *This is a global setting valid for all patches in a bank!*

Knob section: Top row:

Decay - turning to left will shorten the decay and

Pitch - allows to adjust the instrument from -1 to +1 octave in semitone steps

Pitch Variation - adds an adjustable amount of human touch to the instrument play

Mid row:

EQ Low to adjust low frequency response approx. +/- 12 db

EQ High to adjust high frequency response approx. +/- 12 db

Pan - pan position to the instrument

Bottom Row:

Delay Send - sends amount to the master stereo delay

Reverb Send - sends amount to the master stereo reverb

Level - volume setting of the instrument

Master section

Stereo delay: with bpm related delay setting, Delay Groove (offsetting the delay), Feedback and Delay to Reverb send.

Stereo Reverb: Width, Room, Damp and Reverb mix to main signal

Stereo Flanger: bpm related tempo setting and manual Rate offset, Depth, Feedback, Phase between left and right channel to emphasize stereo effect, Dry : Wet Mix.

Main EQ:

EQ Low to adjust low frequency response approx. +/- 12 db

EQ High to adjust high frequency response approx. +/- 12 db

Boost gives some saturation or enhanced 'presence' to the sound

Main Vol - the overall volume

Main Control section

Top section:

internal Patch selector

Patch Name to name or rename a patch (don't forget to save then)

Patch Copy to copy one patch to a different program number

Lower section:

Host Control set to active allows to start and stop the machine via 'Space bar' of PC keyboard in a host application

While Start/Stop button allows to Start and Stop the machine manually.

With Host Sync set to active the Tempo will be controlled by the host application while set to off Tempo can be adjusted by the big numbered tempo display via click and drag.

Internal Tempo setting (76 bpm shown in image above) is limited from 50 to 130 which is the recommended range for use with this instrument. This can be overridden by syncing to host tempo via Host Sync button.

On the right:

Divider for the beat which is usually set to 1/16.

Knob for shuffle amount with display in percentage

Pattern Sequencer section

Please notice in the top row the **Donate** button if you appreciate my work and want to support it by a donation of an amount this instrument seem to be worth to you - Thank you very much for this.

Anyway lets have a look at this section starting with the Beat row which is a line of 8 LED indicators following the beats played. Below this row are the selectors for Step Mode and Play (number of beats) of the 8 steps. Step Mode changes the order of steps to play in jumping to every 3rd, 4th, 5th etc. step with setting at 7 steps playing the sequence backwards. This is a real playground not only for the lovers of experimental rhythms.

Play number of beats i.e. steps allows to set a number of steps played from 1 to 8 so you can have a 7/8, 6/8, 5/8 or even 3/8 beats while Normal is 8 steps to be played.

The next row shows some controls for the pattern sequencer which are present mainly to ease programming the 8 step beat patterns.

You might set the control for the Pattern seq. to Manual so the currently selected Pattern step will be repeated. You can manually advance to next pattern step by the Forward Trigger button. Also you may set 1st and last step to be played within the Pattern seq up to 8 for editing or set to 16 for normal play.

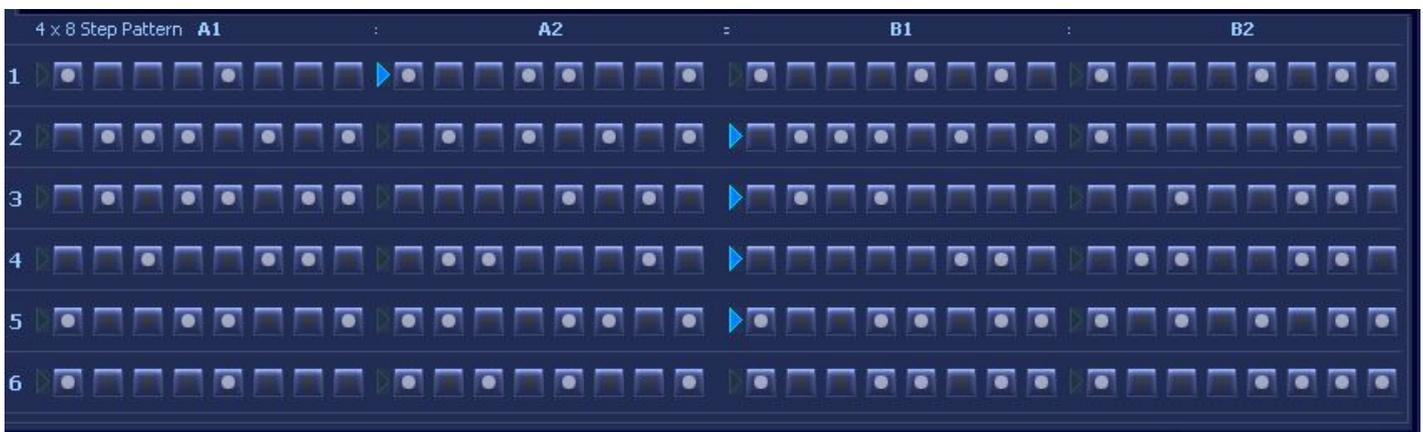

The following row displays to lines of LED for the 16 steps of the Pattern Seq.

Below are the groups of 16 selectors for each track to set Beat pattern A1, A2, B1 B2 or M for mute

The Auto Track Mute feature on top of this sections allows muting of one or two tracks from tracks 4, 5 and 6 for a certain range. The Change Trigger can be set by the Change Step selector which is referring to the 16 steps of Pattern sequencer. Also you can exclude tracks from being affected by the Auto Track Mute feature.

In general this Auto Track Mute is helpful when improvising while having Percumat 2 play some rhythm in the background.

The actual beats of the 8 step Pattern are programmed via the matrix shown in the image - simply set step to on or off

FAQ: Why are there no rhythm kits selectable?

A: You can use presets to set up rhythm kits :p

FAQ: How to load SF2 files

A: there is a small button labeled SF2 right to the Donate button ;-)

FAQ: Sometimes I get multiple additional beats after Stop and Start again?

A: To exclude such behaviour proceed as follows: Stop, set to Pause, Reset, Start and set Pause to off

Explicit thanks for patches, betatesting and/or other valuable assistance go to:

Dimitri Schkoda, Lloyd McKay, Marnix Praet, Bob O'Donnell, debbie (on kvr), & Heinrich Horstmann

This VSTi was created with SynthEdit by Jeff McClintock using further modules by Kelly D. Lynch, David Haupt, Lance Putnam, Oli Larkin and Peter Schoffhauzer - thank you guys ;-)

Have fun

H.G. Fortune

Just a sidenote to this VSTi:

This one is Donationware that means you may freely use it and if you like it you are requested to make a donation to me via Paypal (Moneybookers on request) of an amount you can afford and this instrument is worth to you. You can also make a donation if you simply wish to support my work in general ;-)

Thank you in advance.

As it is Donationware it can be distributed freely according to the Terms of License Agreement (see end of manual) and for updates or additions, more patches you might check my webpage or my support thread in the forum on kvraudio.com.

Appendix 1:

Trigger via MIDI keys had to be removed as it did give some issues not to be solved in short.

Appendix 2:

MIDI CC - are not implemented as you can do your own assignment of controllers !!!

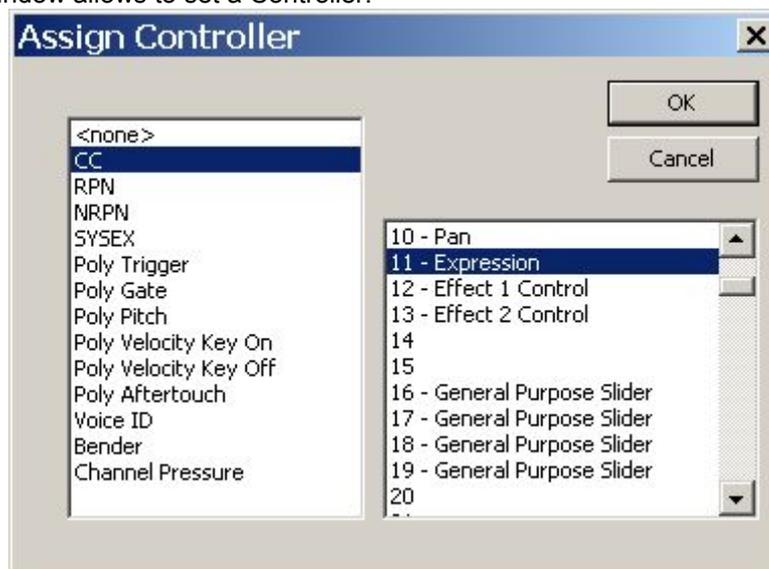

One exception CC#7 for Main Volume is set.

Simply click on a resp knob you want to set a MIDI CC for, then left click the mouse and a popup menu will appear offering MIDI Learn and Edit

Example for Shuffle Knob

After left clicking on the Shuffle Knob a popup selector appears to Learn, UnLearn or Edit MIDI Controller, For editing the following window allows to set a Controller:

Appendix 3 on sf2:

this shows the typical keyrange for a percussion instrument used for a *melodic* preset in sf2 files to be used for Percumat 2 .

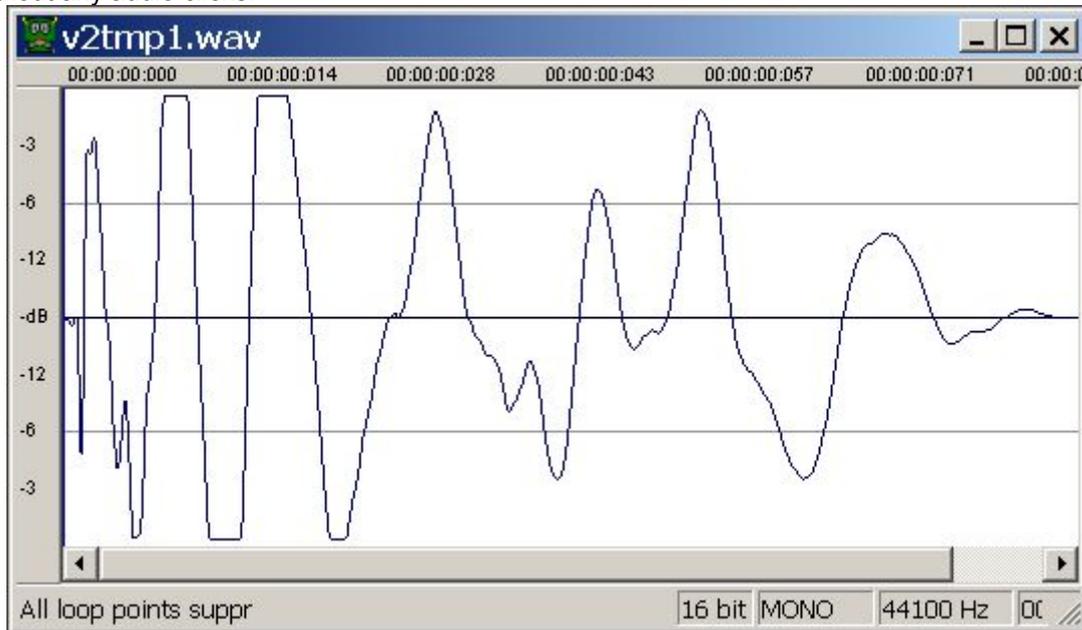

red marker indicates root note of #60 and a range of plus/minus approx. 1 octave which is the range required at minimum

Appendix 3 on loading wave files:

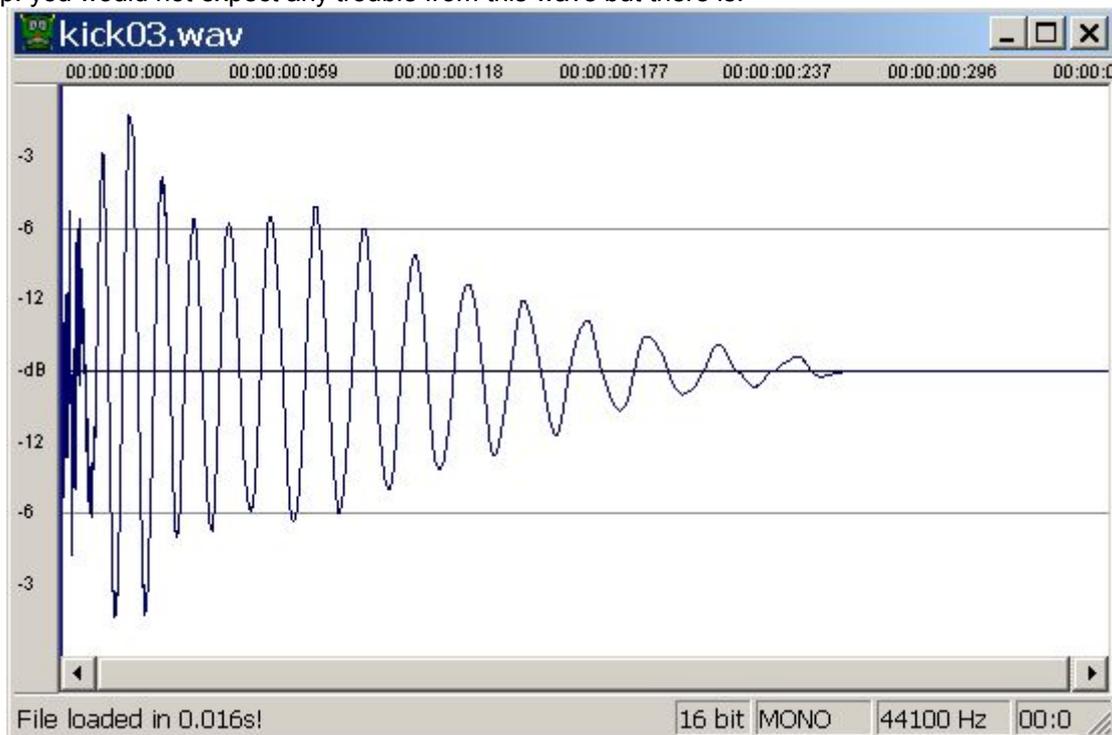

Basically this works fine nevertheless you might experience some audio clicks with some lower frequency samples like kicks, toms or so esp. when transposing down so transposing up is a possible remedy in many cases.

Here are two examples showing those audio clicks are definitively not due to clipped peaks in a sample or so.

This is kickdrum # 13 (12 in sf2 number) of the internal set bank 0 You'll notice it has quite a lot of peaks clipped but it works fine without any audio clicks:

on the other hand this is one kick which did show audio clicks while sounding without those clicks when transposed 13 semitones up: you would not expect any trouble from this wave but there is.
