SR202 Release Notes

Decompressing the electronic distribution package of the SR202 software constitutes acceptance of the following terms and conditions:

1. The SR202 and supplementary files provided ("The Software") are copyright Future Publishing Plc 2001. The Software may not be copied* or distributed (by any means, mechanical or electronic). This covers, but is not limited to, posting to websites, newsgroups or sending via e-mail. Doing so would violate copyright law and is a criminal offence.
2. You are granted a license to use The Software on one computer only at a time. You may not resell, rent or otherwise transfer The Software to another party for benefit.
3. The Software has been extensively tested. Unfortunately, due to wide variance in computer and software configurations no guarantee or warranty can realistically be offered or expected. Therefore, no warranty either express or implied is given as to fitness for a particular purpose.
4. In areas where limited guarantees/warranties cannot be enforced the maximum available remedy will be, in case of dispute, the actual price you paid for The Software.
5. In the event of The Software being found to be defective, the remedy for purchasers is limited to an updated version of The Software as and when one is made generally available.
6. Future Publishing Plc/Muon Software Ltd cannot be held responsible for any direct or indirect/consequential loss or damage caused by the use of, or inability to use, The Software.
7. Use of The Software is entirely at your risk.
8. You are encouraged to be careful with your amplification and monitoring equipment.

* You are permitted to make one personal diskette copy of The Software as a backup in case of emergency.

**EXTRACTING THE PRODUCT FILE CONSTITUTES ACCEPTANCE OF
THE TERMS OF THIS AGREEMENT**

Installation Instructions

1. Copy the SR202 file to your vstplugins folder (on the PC platform the program file will be a .DLL file, called "SR202.dll"). On the Mac the file will be called "SR202" and should have a VST-style icon.

v1.0 Known Issues

1. When the SR202 is loaded into a VST Instrument rack sometimes the left channel volume appears to be attenuated, despite the fader being at unity gain and the pan hard left. This is a bug in VST3.7, not in the SR202. To rectify, "jiggle" the pan gadget of the offending track, then set back to maximum. VST3.7r1 does not appear to correct this bug.
2. Background graphics do not update whilst a knob is being turned in many hosts (Logic Audio, Orion, Fruity Loops). This is not a bug in the SR202 but the host software itself, and is not harmful.
3. Certain host software have limitations which mean that the full functionality of SR202 may not be available:

Host Program	Issue
Cubase up to 3.7 Cubasis prior to v3	Cannot save sample data along with song
Logic Audio (all versions)	Cannot save sample data along with song Does not support multiple outputs
Magix Music Maker G6	Cannot save sample data along with song Does not support multiple outputs
Fruity Loops	Does not support multiple outputs
Buzz/Psycle	Does not support multiple outputs
