

# Wahman by NSP

<http://www.nsp-vst.ru/>

version 0.4

## User Guide

### Introduction

Wahman is a free audio plugin for Microsoft Windows, wah-wah stomp emulation, based on real scheme.

### Features

- 64-bit internal processing
- input level adjustment
- mono/stereo processing
- 64/32-bit versions

### Minimum system requirements

- OS Vista or higher
- DAW 64/32-bit compatible with VST2 support
- CPU Intel Core 2 or newer
- RAM 2 GB
- Disk Space 5 MB

### Installing

- 64-bit: put "Wahman\_x64.dll" to your  
"Program Files\Steinberg\VstPlugins\" directory
- 32-bit: put "Wahman\_x86.dll" to your  
"Program Files (x86)\Steinberg\VstPlugins\" directory

### Controls

- EFFECT: controls the amount of wah-wah effect;
  - FREQ: controls effect main frequency (750 Hz by default);
  - BANDWIDTH: controls effect bandwidth;
  - INPUT: controls plugin input level (in 0.1 \* dB);
  - OUTPUT: controls plugin output level (in 0.1 \* dB);
  - STEREO: sets the stereo sound reproduction (Off or On);
  - POWER: gives the ability to enable/disable plugin.
- Hint: Default plugin settings can be set by Ctrl + Left click.

### Troubleshooting

- in case of plugin crash/incorrect working try to remove plugin from DAW's signal chain and to paste it again.

Please feel free to ask me any questions or to contact me by [nsp-vst@inbox.ru](mailto:nsp-vst@inbox.ru). I'm always open for the new projects, startups, etc.

Thank you!
