Ma3
STUDIO

Ma3 Studio creates and uses its own plugins. The plugins, which are completed with unique algorithms, shorten the work time and create magical effects. We decided to make these plugins public. Add magic to your music.

Synth Hammer is an enhancer with unique characteristics internally. It makes the main synth vivid and powerful. Just turn the amount knob. Your music will become exciting.

- **Amount:** A unique algorithm creates vivid power in your synth.
- **Tone:** Adjusts the tone by emphasizing the bass or treble.
- **Haas:** Widens the stereo field by giving a time difference to both ears.
- **Saturation:** It creates overtones, making the sound thicker and more solid.
- **OUT:** Adjust the out level.
- **BYPASS:** The effect is bypassed.
- Double-clicking the knob will return it to its default position.

This plugin supports automation. Don't just manually manipulate the knobs, actively use automation. Create heart-pounding music.

Our plugin development and adventures continue. Visit our webpage to download new free plugins. Thank you.
